

Pregnant women initially eligible
n=93 (May. 2016 ~ March. 2018)

Exclusion (n=42) (45.1%)

- Delivered child before the start of data acquisition (n=13)
- Caesarean section (n=5)
- The CGM had already been used by other patients, delivery time overlapped (n=24)

Allocated real-time
Continuous Glucose Monitoring
(n=51) (54.9%)

During labor of
PwGDM
n=25 (26.9%)

During labor of
PwNGT
n=26 (28.0%)

Exclusion (n=8) (8.6%)
Unable to analyze

- PwGDM (n=4)
- PwNGT (n=4)

Able to analyze data after allocation to
Real-time Continuous Glucose
Monitoring (n=40) (43.0%)

During labor of
PwGDM
(n=18) (19.4%)

During labor of
PwNGT
(n=22) (23.6%)

Exclusion (n=3) (3.2%)

- Overt diabetes in pregnancy (n=2)
- Diagnosis of type 1 diabetes after delivery (n=1)

35 years old GDM

17:40 Full dilatation of the cervix

● SMBG Check points (BG Levels)

14:30~ The active labor phase

Period 4

20:40 Finish

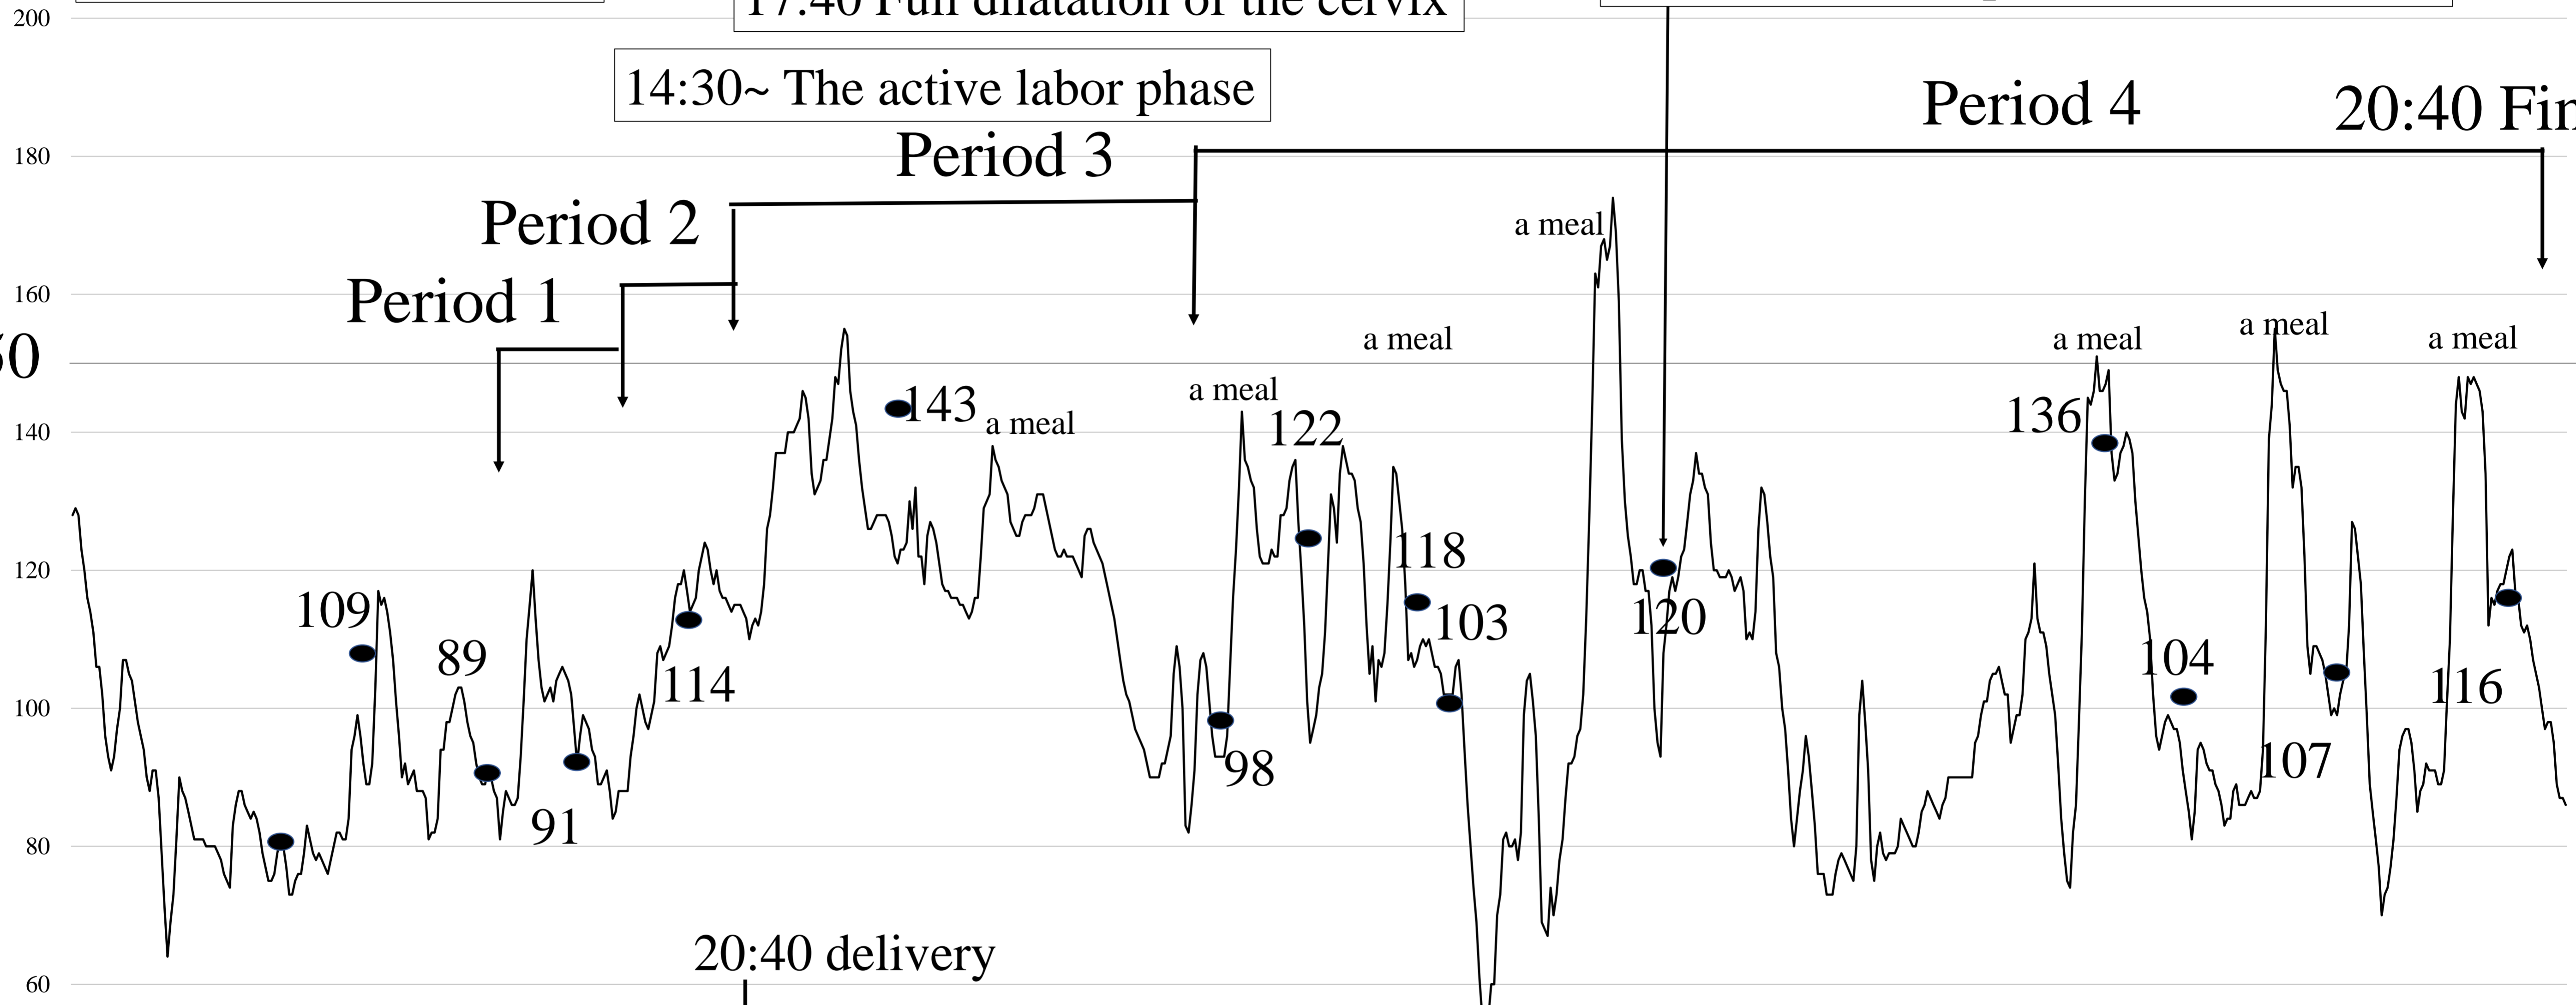

Period 3
